(417) 831-5052 • FAX (417) 831-6258 P. O. Box 469 GMF, Springfield, MO 65801-0469

October 15, 1990

Randy Lyman Springfield Department of Public Works 830 Boonville Avenue Springfield, Missouri 65802

Request to discharge approximately 5,530 gallons of water to the S.W. Wastewater Treatment Plant.

Dear Mr. Lyman:

Sunbelt Industrial Services is providing this letter on behalf of Southwestern Bell Telephone.

Manhole walls located on the 2700 block of West Walnut were found to have been contaminated with an oil/tar material showing 97 ppm PCB's. During a heavy period of rainfall, a cable within manhole #180 developed an air leak. Due to this leak, it was imperative that the rainwater be pumped into drums to relieve the water pressure. The water was pumped on October 5, 9 and 10th.

Analyzed composite samples from these drums show no detectable quantities of PCB's <1.0 ppb. These samples were also tested for the Southwestern Wastewater Treatment Plant parameters and passed all discharge limitations. There are 46-55 gallon drums of water that we will deliver to the Southwest Wastewater Treatment Plant via German Septic Tank Service.

Also, manhole #180A (westwardly downgradient from manhole #180) contains approximately 3,000 gallons of water. results show no detectable PCB's <1.0 ppb, coinciding with passing discharge parameters.

2700 W. Walnut

P. O. Box 469 GMF, Springfield, Missouri 65801 • (417) 831-5052 • FAX (417) 831-6258

We have received approval from Bob Krager with MDNR for pumping directly from the manhole to the septic tanker to then be transported to the Southwestern Wastewater Treatment Plant.

If there are any questions, or if you need more information, please call me at 831-5052.

Sincerely,

Lori Young

Environmental Sales Technician
